*APPENDIX C:
BRANCH LIBRARY DEVELOPMENT
ISSUES*

This appendix outlines various considerations and options regarding branch library development. As a library considers branches, there are a number of strategic issues to consider that affect the type of branch that the library will employ:

- C.1 Centralized versus de-centralized branches
- C.2 Resource distribution models in branches
- C.3 Resource duplication among branches
- C.4 Alternate branch “types”

As the Plainfield Public Library considers alternatives for branch library development, these issues will shape discussions regarding the kind of branch library service that will be most suitable in this community. As the type of branch is determined, the prospective space needs of the branch can be determined. The possibility of the branch library’s impact on main library use and resource inventories can also be examined.

*C.1 CENTRALIZED BRANCHES VS.
DE-CENTRALIZED BRANCES*

The degree to which a library elects to centralize resources in a branch environment will condition the amount of duplication of resources found throughout the organization.

A centralized model for providing service is the traditional approach of maintaining a larger, central collection and resource, with one or more smaller branch facilities that operate as satellites. The branches in this model focus on the most heavily-used topics and information resources, and rely on the more extensive resources held at the main library to meet more unusual patron needs. A variation on this theme creates a hierarchy among branches, with differing levels of resources provided at different locations, with a limited number of larger, regional branches, other conventional branches, and possibly a number of even smaller branches that might be little more than reading rooms.

A decentralized model for providing service assumes that resources will be distributed more or less evenly throughout the system's facilities and service outlets. Typically there is no traditional "main" library. This model also assumes that duplication among the library's facilities will be minimized by defining special areas of interest at each facility. In a decentralized model, one facility may be designated the library's business collection, another may be designated its children's collection, another its audiovisual collection, and so on. In this example, the outlet designated as the business collection would not completely exclude other types of holdings (children's and nonprint material, for example)
